

Windshire Park

Filing 1 Phases 1, 2 & 3

See map below for this area.

Things you should know about your non-potable water system:

1. Stay out of the District's meter pit.
2. **You must know where your shut off valve is.** It is not in the District meter pit.
3. **Make sure you have the correct valve key if one is needed to turn off your shut-off valve.**

The older Filing 1 with Phases 1, 2 & 3: some homes had a round metal cap or metal wheeled sprocket and you had to use a valve key to open and close the valve. If you have this type, you should replace it.

Last year a homeowner could not find there shut off valve, the District had to turn off the whole zone for 5 days so this person could find and fix shut off valve, leaving that whole block without non-potable water.

4. You should have a rain sensor installed and set at ½ inch to ¾ inch of rain.
5. You should have an inline filter installed.
6. Irrigation heads should be cleaned several times a year or as needed.
7. You have your irrigation clock turned on and set to water at the same time as the watering schedule for your area.
8. Check your irrigation clock for correct time, am and pm, and have set the correct year on your irrigation clock.
9. Check back up battery supply.
10. Google or go to manufactures web site to learn how to operate your irrigation clock.
11. Non-potable water system shuts down on the 3rd Friday of October, see the winterization schedule.
